

FLOORPLAN THREE

Floorplan Three is 52' wide, 50' deep, and 18' high.

Just like all KOKV Hangars, Floorplan Three is accessible from the airport service road and will feature parking at the back of the hangar as well as the ability to drive into the hangar to park inside. The front of the hangar connects directly to the general aviation ramp near the southeast end of Runway 32. Each hangar is part of a larger building that includes a central compressed air system, internet, electronic access control, a small outdoor picnic area, and common storage.
